

Center Bonded Mounts

Featuring: CB-1100 Series
CB-1180 Series
CBA Series
CBA-50 Series
STA Series
Safetied Tubeform Series

Center Bonded Mounts isolate vibration, control shock and reduce noise due to structure borne vibrations. Available in a full range of rated load capacities and able to withstand shock loads of 10 g's, these mounts effectively protect equipment and improve operator comfort. They are ideal for automotive, marine, railroad and industrial markets.

Center Bonded Mounts provide flexible suspension systems for mobile, transport-mounted or portable equipment. Typical applications include engines, cabs, fuel tanks, pumps, air conditioning units, compressors and industrial machinery.

Features and Benefits:

- Vibration isolation in all directions.
- Noise attenuation.
- Easy installation because of one-piece design.
- Low-cost installation.
- Long service life.
- Consistent performance because of permanently bonded design.
- Shock protection in all directions provided by cushioned snubbing, no metal-to-metal bottoming.
- Standard sizes available from stock.
- Space-saving size.
- Captive installation after overload failure when recommended bolt, washer and nut are used.
- Accommodate English and Metric bolts.

Application Engineering Assistance:

Frequently, vibration isolation problems require a system engineering analysis. Lord has the computer capability, as well as specialized programs, for analyzing engine/transmission combinations. The output from this analysis is a mounting proposal which optimizes performance over the complete range of operating speeds. This service is available to you upon request.

Center Bonded Mounts

Mounts and washers only supplied by Lord.
For installation instructions, see P. 62.

● These ratings are for general industrial applications. For on-highway use 80% of loads shown. For off-highway use 70% of loads shown.

In applications where the mounts will be immersed in oil, parts made in oil-resistant elastomer are available. Contact Lord Corporation for additional information.

* For tightening torque information, see Pp.121 and 122.

❷ Ratings are the same for on-highway, off-highway and general industrial use.

Material and Finish:

Mounting: Natural rubber, non oil-resistant, low carbon steel, corrosion resistant coated.

Rebound Washer: Steel, zinc plated
Mounts are designed to be loaded in the axial direction only.
If bracket provides support equal to top rebound washer, Diameter A top rebound washer is not required.

Bottom rebound washer is required for all installations; see tabulation for part number.

Installation Guide

Specifications

Materials: The elastomers are high quality natural rubber which meet Lord specifications (available upon request).

The elastomer-to-metal bonds are stronger than the elastomer.

Environmental: For applications in severe oil environments, contact Lord Corporation. Based on extensive experience, center bonded mounts have been designed to operate in normal fluid, temperature and other environmental conditions such as found in the engine compartment of on- and off-highway applications.

Testing/Quality Control: Drawings of each part specify the load deflection tests which are performed to assure consistency of spring rate characteristics.

Testing/Performance: Extensive laboratory fatigue testing has been performed under simulated service conditions.

Installation

Installation is simple, consisting of four steps:

1. Both mount and socket should be lightly lubricated with rubber lubricant or water. A special rubber lubricant, P-80 Emulsion, is available from International Products Corporation, P.O. Box 70, Burlington, NJ 08016-0070, Phone: (609) 386-8770, FAX: (609) 386-8438.
2. Insert part in socket and rotate part by hand while applying axial force until partially positioned. Insert assembly driver in the metal inner member of the mount. Care should be taken that the driving device does not overhang the outside diameter of the inner member in order to prevent damage to the elastomer.
3. Apply pressure to the driving device to seat the mount in its socket.
4. Assemble the other elements of the support, insert the mount bolt and tighten to the required torque. When the nut is tightened against the snubbing washer, the rebound shoulder is formed automatically. The resulting pre-compression assures optimum performance.
