in Anti-Vibration Flange Mounts

Flange mounts, or anti-vibration mounts, are universal mounting and popular in a wide range of applications and industries. Flange mounts are cost-effective, high-performing, and easy to install. The rubber is used in shear compression providing optimum performance and a wide range of flexibility. Offering vibration reduction up to 95%.

The metal top cover provides protection from contamination, such as oil and fuel. The 2-bolt flange has load ratings from 20kg to 5,000kg.

Flange mounts are designed with an integral mechanism to stop and control the movement of the mounted equipment. These mounts are easy to install, allowing for quicker installs and
